Sandia National Laboratories is a multimission laboratory managed and operated by National Technology and Engineering Solutions of Sandia LLC, a wholly owned subsidiary of Honeywell International Inc. for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-NA0003525.

# What is wargaming?

A wargame is a dynamic representation of conflict or competition in a synthetic environment, in which people make decisions and respond to the consequences of those decisions [1]

Naval wargame played at the US Naval War College (1954)

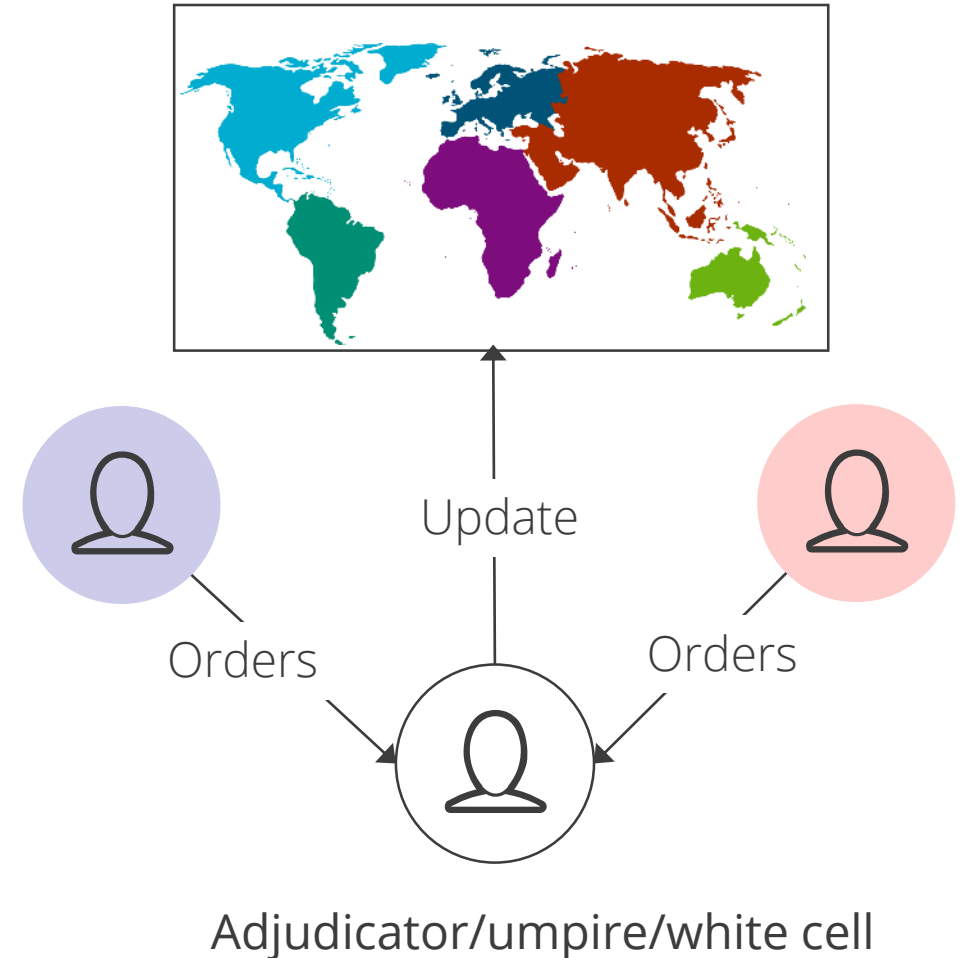

South China Sea wargame organized with CNAS and NBCs *Meet the Press*

Political-Military Wargaming (RAND, 1950's)

[1] Perla, "Terms of Reference", MORS Special Meeting, Wargaming Workshop, October, 17-21 October 2016.

## Some limitations of traditional wargames

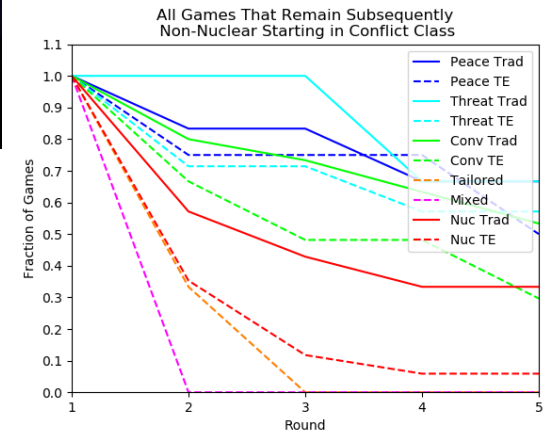

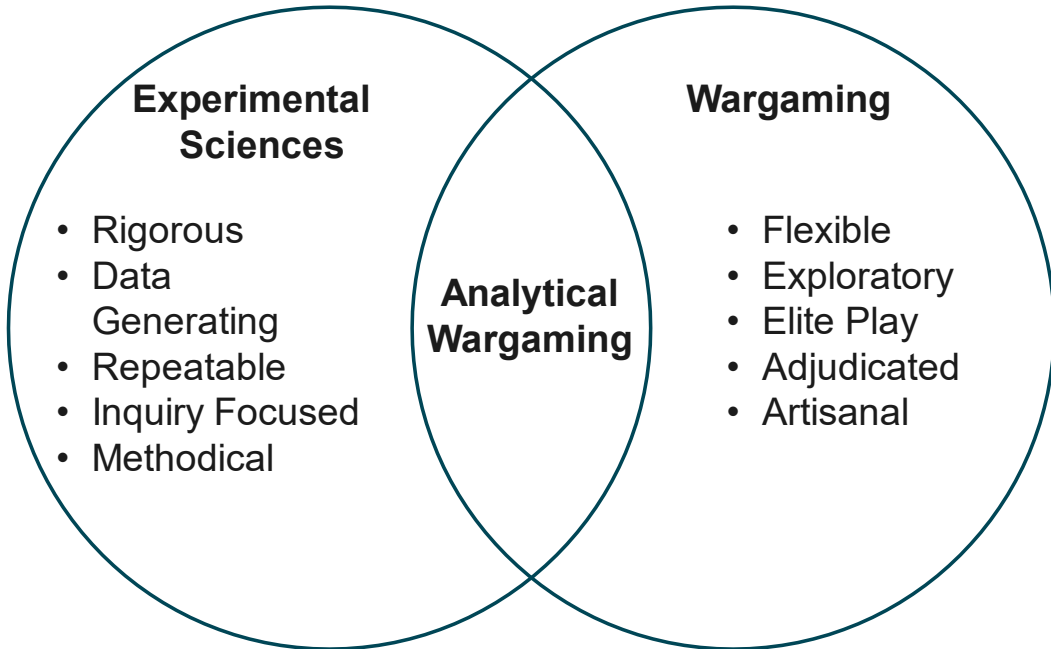

- Experiential rather than experimental
  - Player engagement and interaction
  - Focused on exploration rather than analysis
- Potential biases
  - Sample bias
  - Adjudication bias
  - Replication challenges
- Hard to collect data
  - Limited runs
  - Often qualitative
  - Data collection is often incidental
  - Wargame design is treated as intellectual property

# Analytical games are laboratories to study strategic interaction

- Generates synthetic data for theory development and testing
  - Especially valuable where observational data is limited or non-existent
- Provides a new type of experimental tool for social science research
- Addresses limits of existing wargaming methods related to causal inference, generalizability, and replicability

# Analytical games complement traditional wargames

Traditional wargames focus on insight generation and exploration of strategies for players.

- Seminar games
- Tactical games
- Matrix games

Analytical wargames focus on capturing large-n data sets for analysis.

- Identifying possible causal relationships
- Proving support for hypotheses
- Bracketing scenario variables

Traditional wargame approaches and analytical games, used together, enables iteration and deeper analysis of complex strategic interaction scenarios.
